

SAAD ASHRAF MOHAMED

Backend .NET Developer · ASP.NET Core | C# | EF Core | PostgreSQL

saadamams55@gmail.com · +201014547148 · Egypt · Open to Remote · [GitHub](#) · [LinkedIn](#)

PROFESSIONAL SUMMARY

Backend .NET Developer with 2+ years of production experience delivering full-stack systems across MENA. Built DataForge — a production-grade headless CMS in .NET 8 featuring a dynamic DDL engine, depth-controlled relation resolution (M2O/O2M/M2M), and a complete Auth system with JWT, refresh tokens, and RBAC. Prior background in Laravel and Node.js provides strong fundamentals in API architecture, database schema design, and system delivery from zero to production.

TECHNICAL SKILLS

.NET Stack	C#, ASP.NET Core 8, Entity Framework Core 8, Dapper, ASP.NET Identity, JWT, Serilog, AutoMapper, MailKit, ClosedXML, Swagger
Architecture	REST API Design, Repository Pattern, Clean Architecture, SOLID, CQRS, DDD
Databases	PostgreSQL, MySQL — Schema Design, Query Optimization, EF Core, Dynamic DDL
DevOps	Docker, Docker Compose, Railway, Vercel, Hostinger VPS
Prior Stack	Laravel (PHP), Node.js, Nest.js, Express.js
Frontend	Vue.js, Nuxt.js, TypeScript, Tailwind CSS, Pinia, Vuetify
Tools	Git, Postman, Swagger, Figma

.NET PROJECTS

DataForge — Headless CMS — [.NET 8 · ASP.NET Core · EF Core 8 + Dapper · PostgreSQL · JWT · Serilog · \[GitHub\]\(#\)](#)

- Built a production-grade headless CMS inspired by Directus — dynamic collection/field/relation creation at runtime via API, with zero code migrations required.
- Engineered a dynamic DDL engine that creates real PostgreSQL tables and columns at runtime, storing schema metadata in CollectionMetas/FieldMetas/RelationMetas.
- Implemented depth-controlled relation resolution supporting M2O, O2M, M2M, and Files — with Directus-identical field query syntax (e.g. author.name, categories.*, image.*).
- Built complete Auth system: JWT in HttpOnly cookies, refresh tokens (7-day), email verification, forgot/reset password, account locking after 5 failed attempts, RBAC (Admin/User/Moderator).
- Production-ready infrastructure: Global Exception Filter, Request Logging Middleware, Rate Limiting (100 req/min), unified ApiResponse<T> envelope, and auto-migration + seed on startup.

Jeddah Superdome — Hajj Management Dashboard — [.NET 8 · ASP.NET Core · EF Core · MySQL · SignalR · JWT · Serilog · MailKit · \[GitHub\]\(#\)](#)

- Built backend for a Hajj services admin platform supporting two portals: Admin (full access) and Company (scoped to own pilgrims and flights).
- Full CRUD APIs for Pilgrims (with CSV export), Companies, Flights, Users, and Roles — with pagination and role-scoped data access enforced via ASP.NET Identity.
- Implemented real-time push notifications via SignalR (NotificationHub) — events: ReceiveNotification, UnreadCount — with full notification management (send, resend, mark-read, recipients).
- JWT auth in HttpOnly cookies (15-min access + 7-day refresh), forgot/reset password via MailKit, and dynamic Role & Permission management endpoints.

Douri Al-Madares — School League Dashboard — [.NET 8](#) · [ASP.NET Core](#) · [EF Core](#) · [MySQL](#) · [JWT](#) · [MailKit](#) · [ClosedXML](#) · [Docker](#) · [Railway](#) · [GitHub](#) ↗

- Built complete backend for a Saudi school league workforce management system — originally a frontend-only Vue.js project — deployed on Railway via Docker.
- Designed RBAC with 5 roles (Operations Manager, Project Manager, Supervisor, Protocol, Organizer) enforced via ASP.NET Identity + claims.
- Full CRUD APIs for Users, Locations, Shifts, Attendance Records, and Financial Transactions — with pagination and Excel export via ClosedXML.
- Complete Auth flow: JWT + HttpOnly refresh cookie, email OTP verification, forgot/reset password, per-endpoint rate limiting (login: 5/min, register: 3/min).
- Dashboard statistics aggregation endpoint feeding Chart.js visualizations and real-time KPI widgets on the frontend.

PRIOR EXPERIENCE (FULL STACK ENGINEER)

Full Stack Engineer | [Contract](#) · [Remote](#)

Jan 2024 – Present

- Saven Wear (E-Commerce): Full-stack ownership — MySQL schema, Laravel REST API (JWT + Google OAuth 2.0), Nuxt.js SSR storefront, deployed on Hostinger VPS. Order lifecycle, refund flows, and InstaPay payment integration.
- Urban Observatory – Al Madinah Region (KSA): Interactive data platform for Al Madinah Region Development Authority — dynamic maps, statistical charts, multi-sector Arabic RTL UI (Vue.js + Vuetify).
- Media Development Center – Birzeit University: University web platform integrated with Directus headless CMS (Vue.js).
- Farah Card – Loyalty Platform (UAE): Figma to Laravel Blade templates with full RTL/LTR support; refactored legacy admin dashboard.
- Juteeg: Resolved architectural issues in a critically degraded Nuxt.js codebase, fixed broken API integrations, improved rendering performance.
- Additional: Obayh, Neolt, Numo Academy, Tashrif, Imtethal — multivendor, e-learning, government, and loyalty platforms (Vue.js / Nuxt.js).

EDUCATION

B.Sc. Communications & Electronics Engineering | [Al-Azhar University](#)

2018 – 2023

Full-Stack Web Development Certificate | [ITI \(Information Technology Institute\)](#)

2023

Relevant Courses: ASP.NET Core & C# · Laravel 12 + Vue 3 SPA · Nuxt.js 3 TypeScript · Node.js + React

ADDITIONAL

Languages: Arabic (Native) · English (Professional Working Proficiency — Technical & Async Communication)
